

MAXIM KRAVCHUK

WordPress Developer

github.com/Sunder23 | English: [B1/B2]

SUMMARY

WordPress developer with **4.5+ years** of commercial experience building custom themes and plugins from scratch. Specialized in **multilingual** (WPML/Polylang), **high-content** sites — real estate portals and e-commerce — with modern tooling: ACF/SCF, custom Gutenberg blocks, Vite build pipelines, Docker-based environments and CI/CD. Comfortable owning a project end-to-end: server diagnostics, database work and bulk WP-CLI operations on one side, pixel-perfect Figma implementation on the other.

SELECTED PROJECTS & RESULTS

Real Estate Portal (WPML, ~6,000 listings) *Freelance · maintenance & optimization*

- Maintain a trilingual (EN/BG/RU) property portal with **~6,000 listings**; resolved severe wp-admin slowdowns by diagnosing and fixing Action Scheduler bloat and WPML REST loopback timeouts.
- Bulk-imported **~20,000 images** and migrated custom property meta fields via WP-CLI scripts on constrained shared hosting.
- Built a repeatable WPML translation pipeline: WP-CLI string export → AI-assisted translation → SQL import.
- Led a security incident response: located and removed **two web-shell backdoors** and a hidden admin account, rotated credentials and salts, hardened the site.

Real Estate Boilerplate (WordPress + Vite) *Own product · in development*

- Designing a reusable real-estate starter: custom post types (property, agent, complex), taxonomy-driven catalog routing, WP-CLI data import tooling, custom Vite/Vanilla JS theme.

Joomla → WordPress Migration (print company) *Freelance · full migration*

- Migrated a legacy Joomla site by writing a **Python scraper** and WP-CLI import scripts instead of fragile plugin-based migration; rebuilt structured pricing data with ACF.

Multilingual SEO Plugin (Polylang) *Freelance · custom plugin*

- Developed a custom XML sitemap plugin with per-language sub-sitemaps and **hreflang** annotations, replacing RankMath's sitemap module.

WooCommerce Store (multilingual) *Freelance · development & fixes*

- Fixed a GeoIP redirect bug that sent Googlebot to the wrong language version; hardened AJAX handlers (nonce validation, SQL-injection remediation).

Development Workflow & Tooling *Cross-project*

- Set up **GitHub Actions** deployment with staging/production Git flow to shared hosting; Docker Compose local environments with WP-CLI and mail catching.
- AI-augmented workflow: Claude Code for scaffolding and refactoring, automated QA with **Playwright** (MCP) on client sites.

SKILLS

WordPress: custom themes & plugins, ACF / SCF, custom Gutenberg blocks, WooCommerce, WP-CLI, WP REST API, Elementor (client projects)

Multilingual: WPML, Polylang, hreflang, translation workflows at scale

Languages & Front-end: PHP 8+, JavaScript (ES6+), HTML5, CSS3, SASS/SCSS, Vite

Data & DevOps: MySQL, Docker / Docker Compose, Git, GitHub Actions (CI/CD), Linux/SSH

Additional: Playwright QA automation, Figma-to-WordPress (pixel-perfect), Claude Code / AI-assisted development
